	PAGE
PRESENTS TO THE LIBRARY - - - - -	vii
SYLLABUS of Papers read during Session 1911-12 - - -	v
BRASH, WM.	
Two General Theorems in the Differential Calculus -	107
CARSLAW, Prof. H. S.	
A Problem in the Linear Flow of Heat discussed from the point of view of the Theory of Integral Equations -	97
DONALDSON, J. A.	
An infinite series of triangles and conics with a common pole and polar - - - - -	13
EDWARDES, F. E.	
The condition that the family of surfaces $\phi(x, y, z, \lambda) = 0$ may be one of an orthogonal triad - - - - -	37
GOLDZIHNER, Prof. C.	
Graphical Integration - - - - -	49
HORSBURGH, E. M.	
Proof of a Fundamental Relation in the Theory of Bending between the Bending Moment and Load Curves, or between the Deflection and Bending Moment Curves	64
LEVY, H.	
An Extension of Clairaut's Differential Equation	39
MILNE, W. P.	
(1) The system of cubic curves circumscribing two triangles and a polar to them - - - - -	2
(2) An easy geometrical representation of the Sextic Co- variant of a Binary Quartic - - - - -	65
(3) Further Investigations on Circular Cubics and Bi- Circular Quartics - - - - -	75

	PAGE
MUIRHEAD, R. F.	
A mechanism for solving equations of the $n^{\text{th}}$ degree -	69
SOMMERVILLE, D. M. Y.	
Note on Legendre's and Bertrand's Proofs of the Parallel- Postulate by Infinite Areas - - - -	31
STOKES, G. D. C.	
An Analytical Study of Plane Rolling Mechanisms -	54
TAYLOR, D. G.	
Linear Substitutions and their Invariants - - -	117
TEIXEIRA, Professor F. GOMES.	
Note on the Researches of Maclaurin on Circular Cubics	89
TWEEDIE, C.	
The Fundamental Formula for the Area of a Triangle in Analytical Geometry - - - -	67
