

THE FORMATION OF THE CONTINENTS BY CONVECTION

By G. F. S. Hills, B.A. viii + 102 pages, illustrated. 7s. 6d. net

Discusses why the continents, consisting of granite, lie in one hemisphere and occupy about one-quarter of the earth's surface, and the ocean floor, probably a basaltic rock, occupies the remainder.

LAKE AND RASTALL'S A TEXTBOOK OF GEOLOGY

Fifth Edition, revised by R. H. Rastall, Sc.D. viii + 491 pages, 32 plates, 129 sections and maps. 28s. net

"'Lake and Rastall' has always been esteemed for its broadness of scope, the clarity of its style, and the unflinching interest of its treatment. In this edition its high reputation should be still further enhanced."—*Nature*.

A GEOLOGY FOR ENGINEERS

By F. G. H. Blyth, M.Sc., A.C.G.I., D.I.C., F.G.S. Second Edition, viii + 329 pages, 16 plates, 148 diagrams. 24s. net

"A complete presentment of elementary geology, the subject being pursued in such a manner that there is no gap between the exposition of fundamentals and the explanation of how a knowledge of geology is applied to the solution of engineering problems."—*Surveyor*.
