## INSTRUCTIONS TO CONTRIBUTORS

The *Journal of Helminthology* publishes papers on all aspects of animal parasitic helminths, particularly those of medical or veterinary importance, but only in exceptional circumstances will systematic or taxonomic studies be acceptable.

Manuscripts, which must be in English or French (with an English summary) should be accompanied by a letter signed by *all* the authors and should be addressed to:

The Editor, Journal of Helminthology,  
CAB International Institute of Parasitology,  
395A Hatfield Road,  
St Albans, Herts AL4 0XQ.  
England.

Three copies of a typescript, on size A4 paper with double spacing, should be submitted. Papers should be preceded by a short abstract and will normally have the following sections: brief Introduction; Materials and Methods; Results; Discussion; Acknowledgements; References. However, the form of the paper may vary, depending on its subject matter; recent past issues should be consulted for a suitable form. Research Notes should also be preceded by a brief abstract. Illustrations should be drawn in Indian ink, preferably not more than double the final size. Care should be taken that all illustrations fit into the format of the Journal. The maximum size an illustration will be printed is 12.0×20.0 cm. Where many separate drawings are made, some indication of how they may be grouped to make a corporate plate without undue wastage of space, should be indicated. Some indication of scale (preferably a scale bar) should normally be given on the figure. Photocopies of illustrations should be enclosed for refereeing purposes. Lettering and numbering, which must be of a high standard, should be added by the author, with due regard for subsequent reduction.

Photographs should be glossy prints of the same size as they are to appear in the Journal (maximum size 12.0×20.0 cm). Composite prints must be mounted and can have the separate photographs abutting; they will then have a separating line inserted by the printers. All figures and letters on photographs must be inserted by the author.

Information should not be repeated in the text and in tables or figures. The legends to tables and to figures should be sufficiently detailed for the information to be understood without reference to the text.

References should be given in alphabetical order with the full title of the journal. The following are examples:

DUKE, B. O. L. (1971) The ecology of onchocerciasis in man and animals. In: *Ecology and Physiology of parasites* (editor, A. M. Fallis) pp. 213–222. Adam Hilger Ltd.: London.

JAMES, C. & WEBBE, G. (1973) A comparison of Egyptian and East African strains of *Schistosoma haematobium*. *Journal of Helminthology*, **47**, 49–59.

25 offprints are provided free of charge; additional copies may be ordered at the proof stage.

# Contents

	Pages
Drug activity against <i>Onchocerca gutturosa</i> males <i>in vitro</i> : a model for chemotherapeutic research on onchocerciasis. S. TOWNSON, C. CONNELLY, A. DOBINSON and R. MULLER	271-281
Effect of cyclosporin A and some derivatives in <i>Litomosoides carinii</i> -infected <i>Mastomys natalensis</i> . H. ZAHNER and K. SCHULTHEISS	282-290
The effect of light and darkness on the production of cercariae of <i>Schistosoma haematobium</i> from <i>Bulinus globosus</i> . K. M. RAYMOND and A. J. PROBERT	291-296
Morphological and histochemical observations on the vitelline cells of developing and adult <i>Paramphistomum cervi</i> (Trematoda: Digenea). B. C. GUPTA, V. R. PARSHAD and S. S. GURAYA	297-305
Survival of shelled acanthors of <i>Moniliformis moniliformis</i> (Acanthocephala) under laboratory conditions. S. E. ARNOLD and D. W. T. CROMPTON	306-310
Chemoprophylactic studies with ivermectin against subperiodic <i>Brugia malayi</i> infection in the leaf monkey, <i>Presbytis cristata</i> . J. W. MAK, P. L. W. LAM, A. NOOR RAIN and K. SURESH	311-314
Ecology of a digenean infection, <i>Cercaria patellae</i> in <i>Patella vulgata</i> near Portavogie Harbour, Northern Ireland. M. R. COPELAND, W. I. MONTGOMERY and R. E. B. HANNA	315-328
<i>Hymenolepis citelli</i> , <i>H. diminuta</i> and <i>H. microstoma</i> : immunoglobulin-containing cells in the lamina propria of the mouse gut during primary and secondary infections. S. T. O. ALGHALI	329-340
Infectivity of <i>Hymenolepis nana</i> eggs from faecal pellets in the rectum of mice. J. MAKI and T. YANAGISAWA	341-345
Chromosome study of <i>Isoparorchis hypselobagri</i> Billet, 1898 (Digenea: Hemiuridae). I. CHATTOPADHYAY and B. MANNA (Research Note)	346-347
The transmission of an avian filarioid <i>Cardiofilaria nilesi</i> to the jird, <i>Meriones unguiculatus</i> . G. L. CHIANG, W. H. CHEONG, K. L. ENG and W. A. SAMARAWICKREMA	349-353
Announcements (International Commission on Zoological Nomenclature)	314, 348
Erratum	328
List of Referees	354-355
Subject Index	356-358
Author Index	359-361
