## The Pioneers

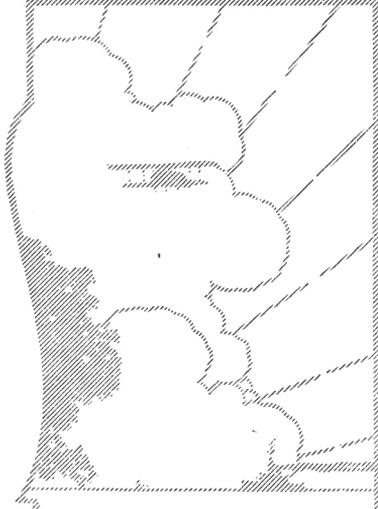

Of the Plywood industry were Venesta Ltd.; they held the premier position then because there were no competitors. Now, in the face of increasing competition from almost every country in the world, they hold it still—indisputably.

### VENESTA PLYWOOD

It is in constant demand by the British and Allied Governments, the largest Shipbuilding and Railway Companies, Aeroplane & Motor Car Builders, etc. It is waterproof, unshrinkable, and practically indestructible, and these qualities, together with its smooth, clean surface, make it the finest material in the world for panelling of every description.

# A British Firm beats the Germans

The great news message told me with great joy of the capture by the Germans of a wonderful British aeroplane. He said that the machine had flown from England to France and had descended in order to bring a "bird" for the Kaiser's use.

**THE MESSAGES.**  
After the two airmen had descended from the machine it was loaded with dynamite bombs in preparation for a flight. The now famous German flying officer B. H. H. took the seat which the Kaiser had reserved and two other officers also boarded the plane. With a terrific bang the two engines were started and the bird the aeroplane rose in the air. It climbed rapidly to about 10,000 ft. and the Kaiser turned to General H. H. H. and said: "How is it that at such a height you are still a creature of the lubricants do not freeze?" The British hero answered the query which we have been seeking for months. "I solved the general." "The great difficulty is now surmounted."

Extract from "Life in Essen."  
Eye-Witness's Account, "Daily Mail," April 8/18.

## THE SECRET

WAKEFIELD

Castrol "R"  
MOTOR OIL (Racing)

was the lubricant used  
Castrol "R" possesses the  
lowest cold test of any  
known Aero Engine Oil.

KAISER (log.): "How is it at such a height on so cold a morning the lubricants do not freeze."

GEN. HÖPPNER: "The British have discovered the secret which we have been seeking for months."

Vide "DAILY MAIL," see above.

## THE MANUFACTURE OF PROPELLERS.

ALL who have seen propellers being carved out by hand will have realised the need of a machine for this work.

The Defiance Patent Propeller Forming Machine dispenses with all hand work except the final finishing operation. It will reduce the total time of production 50 per cent.

The machine works on the copying principle, the model rotating in the back centres while the blank is turned in the front centres. A roller moving over the surface of the model gives the necessary motion to the slide carrying the cutter head operating on the work.

In addition to turning propellers the machine will also deal with struts and other irregular shaped work up to 12in. diameter by 14ft. long.

As sole agents for the Defiance Machine Works we shall be pleased to place the services of a woodworking specialist at the disposal of anyone interested in propeller manufacture.

Guarantees of production can be given together with advice on the best method of operating the machine.

LACQUERING AND DRYING TABLES.**

## Great Hampton St., BIRMINGHAM.

18-20, St. John's Square, Clerkenwell, LONDON.

For many years Engineers who used leather for clutches and brakes have substituted **FERODO FRICTION SURFACES** which are vastly more efficient.

Over twenty years ago we invented Ferodo Fabrics. Since then, by specialising on the one product, and as a result of practical experience, we have so improved them that they are to-day readily acknowledged to be the finest friction surfaces in the world.

They are entirely unaffected by water, oil or acid, and absorb more foot lbs. of energy per square inch than any other material known. Wood and leather linings char and quickly wear out. Ferodo Fabrics are spark-proof and non-inflammable.

*Ferodo Fabrics have the name stamped on each foot. Look for it when ordering your new linings.*

**FERODO**
