WILLIAM P. BIRMINGHAM, *Grove City College*

AIEDAM: Artificial Intelligence for Engineering Design, Analysis and Manufacturing is a journal intended to reach two audiences: *engineers and designers* who see AI technologies as powerful means for solving difficult engineering problems; and *researchers in AI and Computer Science* who are interested in applications of AI and in the theoretical issues that arise from such applications (for detailed information refer to the Aims and Scope section at the inside back cover).

AIEDAM is also interested in original, major applications of state-of-the-art AI techniques to important engineering problems (practicum papers). In addition to the rapid publication and dissemination of unsolicited research papers, **AIEDAM** is committed to producing special issues on important, timely topics. **AIEDAM** is indexed in Compendex Plus, SciSearch, Research Alert, and CompuMath Citation Index.

Editorial Office: Prof. David C. Brown, Editor, **AIEDAM: Artificial Intelligence for Engineering Design, Analysis and Manufacturing**, Computer Science Department, Fuller Labs, Worcester Polytechnic Institute, 100 Institute Road, Worcester, MA 01609, USA. Telephone: (508) 831-5618. Fax: (508) 831-5776. E-mail: aiedam@cs.wpi.edu. Website: www.cs.wpi.edu/~aiedam/

Publishing, Subscription, and Advertising Offices: Cambridge University Press, 32 Avenue of the Americas, New York, NY 10013-2473, USA; and (outside the US and Canada) Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 8RU, UK.

AIEDAM is part of the Cambridge Journals Online (CJO) service. Access to online tables of contents and article abstracts is available to all researchers at no additional costs for institutional subscribers. Access to full text articles online is currently included with the cost of the print subscription. Subscription must be activated; see <http://journals.cambridge.org> for details.

Subscription Information: **AIEDAM: Artificial Intelligence for Engineering, Design, Analysis and Manufacturing** (ISSN 0890-0604) is published quarterly by Cambridge University Press, 32 Avenue of the Americas, New York, NY 10013-2473, USA / Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 8RU, UK. Annual subscription rates for Volume 24, 2010: Institutions print and electronic: US \$860.00 in the US, Canada, and Mexico; UK £490.00 + VAT elsewhere. Institutions electronic only: US \$730.00 in the US, Canada, and Mexico; UK £430.00 + VAT elsewhere. Institutions print only: US \$810.00 in the US, Canada, and Mexico; UK £470.00 + VAT elsewhere. Individuals print and electronic: US \$260.00 in the US, Canada, and Mexico; UK £150.00 + VAT elsewhere. Individuals electronic only: US \$240 in the US, Canada, and Mexico; UK £130 + VAT elsewhere. Individuals print only: US \$250.00 in the US, Canada, and Mexico; UK £140.00 + VAT elsewhere. Prices include postage and insurance.

Boolean Models and Methods in Mathematics, Computer Science, and Engineering

Edited by YVES CRAMA and PETER L. HAMMER

This collection of papers presents a series of in-depth examinations on a variety of advanced topics related to Boolean functions and expressions. The chapters are written by some of the most prominent experts in their respective fields and cover topics ranging from algebra and propositional logic to learning theory, cryptography, computational complexity, electrical engineering, and reliability theory.

Encyclopedia of Mathematics and its Applications

\$175.00: Hardback: 978-0-521-84752-0: 776 pp.

Sparse Image and Signal Processing

Wavelets, Curvelets, Morphological Diversity

JEAN-LUC STARCK, FIONN MURTAGH, and JALAL FADILI

\$70.00: Hardback: 978-0-521-11913-9: 336 pp.

Stochastic Scheduling

Artificial Intelligence

Foundations of Computational Agents

DAVID L. POOLE and ALAN K. MACKWORTH

"The clarity of this book is amazing! Material in each chapter is a perfect blend of accessible stuff for beginners, theory and challenges for advanced students, and reference materials for experts, organized into sections so you can split off the right bits for your students. Its like having three textbooks in one! Definitely the must-have textbook on AI for the 21st century. I know mine will be within reach for years to come."

—Jesse Hoey, University of Dundee

\$90.00: Hardback: 978-0-521-51900-7: 688 pp.

Robotics for Electronics Manufacturing

Principles and Applications in Cleanroom Automation

KARL MATHIA

Contents

1. Industrial robotics
2. Cleanroom robotics
3. Design of atmospheric robots
4. Design of vacuum robots
5. Kinematics
6. Dynamics and control
7. Test and characterization.

\$130.00: Hardback: 978-0-521-87652-0: 250 pp.

Statistical Machine Translation

PHILIPP KOEHN

"Philipp Koehn has provided the first comprehensive text for this rapidly growing field of statistical machine translation. This book is an invaluable resource for students, researcher, and software developers, providing a lucid and detailed presentation of all the important ideas needed to understand or create a state-of-the-art statistical machine translation system."

—Robert C. Moore, Microsoft Research

\$60.00: Hardback: 978-0-521-87415-1: 446 pp.

Prices subject to change.

Fantastic Titles in AI from Cambridge!

Computational Principles of Mobile Robotics

GREGORY DUDEK
and MICHAEL JENKIN

2nd
Edition

This textbook for advanced undergraduates and graduate students emphasizes computation and algorithms for a range of strategies for locomotion, sensing, and reasoning. It concentrates on wheeled and legged mobile robots but discusses a variety of other propulsion systems. This second edition presents advances in robotics and intelligent machines over the last ten years and includes additional mathematical background and an extensive list of sample problems.

\$99.00: Hardback: 978-0-521-87157-0: 408 pp.
\$49.99: Paperback: 978-0-521-69212-0

A Mathematical Tapestry

Demonstrating the Beautiful Unity of Mathematics

PETER HILTON and JEAN PEDERSEN
Illustrated by SYLVIE DONMOYER

\$99.00: Hardback: 978-0-521-76410-0: 306 pp.
\$33.99: Paperback: 978-0-521-12821-6

Networks, Crowds, and Markets

Reasoning About a Highly Connected World

DAVID EASLEY and JON KLEINBERG

"The field of information networks is an emerging discipline of immense importance that combines graph theory, probability and statistics, microeconomics and facets of the social sciences. Easley and Kleinberg present a panoramic view of this field, from basic graph theory all the way to the state of the art in research."

—Prabhakar Raghavan, Head of Yahoo! Labs
\$50.00: Hardback: 978-0-521-19533-1: 744 pp.

Fundamentals of Engineering Numerical Analysis

PARVIZ MOIN

2nd
Edition

This text introduces numerical methods and shows how to develop, analyze, and use them. Complete MATLAB programs are now available at www.cambridge.org/Moin, and more than 30 exercises have been added. This thorough and practical book is a first course in numerical analysis for new graduate students in engineering and physical science.

Data Management for Multimedia Retrieval

K. SELÇUK CANDAN
and MARIA LUISA SAPINO

"This text book is a complete and excellent treatment of multimedia information retrieval and data management. It handles the entire spectrum by providing the basic theory needed and then gradually introduces the advanced techniques needed to tackle the complex issues in multimedia content retrieval."

—B. Prabhakaran, University of Texas at Dallas

Recommender Systems

An Introduction

DIETMAR JANNACH,
MARKUS ZANKER,
ALEXANDER FELFERNIG,
and GERHARD FRIEDRICH

This book offers an overview of approaches to developing state-of-the-art recommender systems that automate a variety of choice-making strategies with the goal of providing affordable, personal, and high-quality recommendations. The authors present algorithmic approaches for generating personalized buying proposals, as well as more interactive and knowledge-based approaches. They discuss how to measure the effectiveness of recommender systems and illustrate the methods with practical case studies.

\$65.00: Hardback: 978-0-521-49336-9: 360 pp.

CAMBRIDGE
UNIVERSITY PRESS

INSTRUCTIONS FOR AUTHORS

AIMS AND SCOPE

AIEDAM: *Artificial Intelligence for Engineering Design, Analysis and Manufacturing* is a journal intended to reach two audiences: *engineers and designers* who see AI technologies as powerful means for solving difficult engineering problems; and *researchers in AI and Computer Science* who are interested in applications of AI and in the theoretical issues that arise from such applications. The journal publishes significant, original articles about AI theory and applications based on the most up to date research in all branches and phases of engineering. Suitable topics include analysis and evaluation, selection, configuration and design, manufacturing and assembly, and concurrent engineering. Specific subareas include cognitive modeling; creativity; learning; qualitative reasoning; spatial reasoning; graphics and modeling; constraints and preferences; style and brands; human-computer interaction; multimodal interaction; computational linguistics; design and process planning; scheduling; simulation; optimization; distributed teams and systems; multiagent applications; design rationale and histories; functional, behavioral, and structural reasoning; knowledge management; and ontologies. **AIEDAM** is also interested in original, major applications of state-of-the-art AI techniques to important engineering problems (practicum papers). In addition to the rapid publication and dissemination of unsolicited research papers, **AIEDAM** is committed to producing special issues on important, timely topics. **AIEDAM** is indexed in Compendex Plus, SciSearch, Research Alert, and CompuMath Citation Index.

ORIGINALITY AND COPYRIGHT

To be considered for publication in **AIEDAM** a manuscript cannot have been published previously, nor can it be under review for publication elsewhere. Papers with multiple authors are reviewed with the assumption that all authors have approved the submitted manuscript and concur in its submission to **AIEDAM**. A Transfer of Copyright Agreement must be executed before an article can be published. Government authors whose articles were created in the course of their employment must so certify in lieu of copyright transfer. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

MANUSCRIPT SUBMISSION AND REVIEW

Three high-quality copies of articles, in English, should be submitted to the Editor.

Prof. David C. Brown, Editor
AIEDAM
Computer Science Department
Worcester Polytechnic Institute
100 Institute Road
Worcester, MA 01609, USA
Phone: (508) 831-5618
Fax: (508) 831-5776
E-mail: aiedam@cs.wpi.edu

Photocopies of typescripts will not be accepted. For refereeing purposes only, good photocopies may be submitted. Upon acceptance of the manuscript submit the top copy and the original illustrations for publication. You are strongly encouraged to submit your manuscript electronically. Please send it as an e-mail attachment to the Editor, with "AI EDAM Submission" as the Subject heading. Accepted manuscripts must be in Word or WordPerfect. LaTeX should only be used when there are numerous mathematical equations. However, Word, PDF, and Postscript are strongly preferred for initial submission. Please include in the text message a description of what was sent and its format to guide extracting the manuscript from the e-mail.

MANUSCRIPT PREPARATION AND STYLE

Paper should be typed in *double* spacing throughout, including tables, footnotes, references, and legends to tables and figures. One side of the paper, only, should be used and there should be a margin of at least 2.5 cm all around. The position of tables and

figures should be clearly indicated, in sequence, in the text. Tables, footnotes, and legends to figures should be typed separately. Where it is essential for clear cross-referencing, particularly in mathematically orientated material, paragraphs and subparagraphs may be numbered, and the decimal system should be used (i.e., 1.1.1., 1.1.2., etc.). A short running title of not more than 40 characters (including spaces) should be indicated if the full title is longer than this. The name of the laboratory where the work has been carried out should be indicated on the title page and the full postal address for the despatch of proofs and offprints should be included on a separate page. Minor corrections to the manuscript may be typed or neatly printed in ink; retyping is required for significant changes. Numbers should be spelled out when they occur at the beginning of a sentence; use Arabic numerals elsewhere.

MANUSCRIPT ELEMENTS AND ORDER

Unless there are obvious and compelling reasons for variation (e.g. review articles, short communications), manuscripts should be organized as follows:

Title page. This is page 1. The title should be concise, informative, and free of abbreviations, chemical formulae, technical jargon, and esoteric terms. This page should include (a) the article's full title, (b) names and affiliations of all authors, (c) the name, mailing address, and telephone number of the corresponding author, (d) the address for reprint requests if different from that of the corresponding author, (e) a short title of 50 characters or less, and (f) a list of the number of manuscript pages, number of tables, and number of figures.

Abstract and keywords page. This is page 2 and should include (a) the article's full title, (b) an abstract of no more than 300 words, and (c) up to 5 keywords or phrases that reflect the content and major thrust of the article. The abstract should give a succinct account of the objective, methods, results, and significance of the subject matter.

Introduction. This section begins on page 3 and should clearly state the objective of the research in the context of previous work bearing directly on the subject. An extensive review of the literature is not usually appropriate.

Citations in text. Customary abbreviations will be accepted and the authors are recommended to employ *Système Internationale (SI/metric)* units. Special and unusual symbols should be clearly identified, especially if handwritten. Spell out acronyms at first use, but use only acronyms thereafter. All equipment supplies and products stated in the article should have the manufacturer name and location identified at first mention.

Tables. Tables should be numbered consecutively with Arabic numerals and each should be typed double-spaced on a separate sheet. All tables are to be grouped together after the references. A short explanatory title and column headings should make the table intelligible without reference to the text. All tables must be cited and their approximate positions indicated in the text.

Figures and legends. The number of figures should be the minimum necessary to make the essential points of the paper. Figures should be supplied no larger than $8 \times 10''$ (approx. 200×250 mm) and must be camera-ready. Photographs will be accepted only if the information cannot be presented easily in any other form. Explanation and keys should, as far as possible, be placed in the legends. Photographs for halftone reproduction must be on white glossy paper. Figures should be composed to occupy a single column (8.3 cm) or two columns (17 cm) after reduction. Diagrams and illustrations must have a professional appearance and be typed or drawn with sharp, black lettering to permit reduction. To assure legibility, letters, numbers, and symbols on figures should all be the same size and have a minimum height of 2 mm (i.e., 6 points on the pica scale) when reduced. Figures should be separate and not incorporated into the text copy.

Artwork should normally be in black and white; if authors have color figures, the publisher will provide a price quotation for the additional production costs. However, color figures can appear online free of cost. All figures must be identified on the back with the short title of the paper, figure number, and figure

orientation (top or bottom). Preferably, figures should be mounted on heavy sheets of the same size as the manuscript. Three complete sets of figures should be carefully packaged in protective envelopes, one to accompany each copy of the manuscript. Each figure must be cited and its approximate position clearly indicated within the text.

Figures must be numbered consecutively with Arabic numerals and be accompanied by a descriptive caption typed double-spaced on a separate sheet. The captions, collected at the end of the manuscript, should concisely describe the figure and identify any symbols and/or calibration bars.

References. Entries should be listed alphabetically by lead author at the end of the paper. All authors' names should be included, followed by the year of publication, the full title of the journal, volume, issue number, and inclusive page numbers. For books, the full title should be given, followed by the editors, volume number (if any), page numbers, publisher, and place of publication. Citations in the text should read Brown and Smith (1973) or (Brown & Smith, 1973). Where there are more than two authors the citation should read: Brown et al. (1973). The conventional Brown (1973a), Brown (1973b) should be used where more than one paper by the author(s) has appeared in the same year.

Journal or Magazine article

Schank, R.C. (1991). Where's the AI? *AI Magazine* 12(4), 38–49.

Segre, M.A. (1991). Learning how to plan. *Robotics and Autonomous Systems* 8(1–2), 93–111.

Book

Dym, C.L. (1994). *Engineering Design: A Synthesis of Views*. New York: Cambridge University Press.

Chapter in an edited book

Nierstrasz, O. (1993). Composing active objects. In *Research Directions in Concurrent Object-Oriented Programming* (Agha, G., Wegner, P., & Yonezawa, A., Eds.), pp. 151–171. Cambridge, MA: MIT Press.

Proceedings

Craw, S., & Sleeman, D. (1990). Automating the refinement of knowledge based systems. *Proc. Ninth Eur. AI Conf.*, pp. 167–172.

Proceedings with publisher identified

Mittal, S., & Frayman, F. (1989). Towards a generic model of configuration tasks. *Proc. Eleventh Int. Joint Conf. Artificial Intelligence*, pp. 1395–1401. San Francisco, CA: Morgan Kaufmann.

The alphabetical list of references begins a new page and must be typed double-spaced. Each in-text citation must have a corresponding reference and vice versa. List works by different authors who are cited within the same parentheses in chronological order, beginning with the earlier work. Journal titles should not be abbreviated. Only published articles and articles in press should appear in this list. The responsibility for the accuracy of references cited lies with the authors.

Author biographies. Brief author biographies will be printed at the end of each paper; they should not exceed 100 words for each author.

COPYEDITING AND PAGE PROOFS

The publisher reserves the right to copyedit manuscripts to conform to the style of **AIEDAM**. The corresponding author will receive page proofs for final proofreading. No rewriting of the final accepted manuscript is permitted at the proof stage, and substantial changes may be charged to the authors.

OFFPRINTS

A free high-quality PDF of the article will be sent to the corresponding author only. Please note that coauthors must send in separate order forms if they wish to purchase offprints or issue copies. A form will accompany the page proofs allowing orders for complete copies of the issue and for the purchase of offprints. The offprint requirements of all coauthors should be included on this form. Orders received after issue printing will be subject to a 50% reprint surcharge.
