

## Subscription rates

Subscription rates for volume **50** (2018) of *Advances in Applied Probability* (AAP) are as follows (post free and online access at <http://cambridge.org/apr>). For libraries and institutions: US\$381.00, £246.00 (online only); US\$418.00, £270.00 (online & print). For individuals, US\$144.00, £92.00 (online & print). The subscription rates for volume **55** (2018) of *Journal of Applied Probability*, the companion publication, are the same; for individual subscribers that order both journals at the same time, the combined price is discounted by 10%. Please send all subscription renewals and enquiries to: [subscriptions\\_newyork@cambridge.org](mailto:subscriptions_newyork@cambridge.org) in the Americas and [journals@cambridge.org](mailto:journals@cambridge.org) for the Rest of the World.

## Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Editor-in-Chief on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L<sup>A</sup>T<sub>E</sub>X class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as portable document format (PDF) files, not exceeding 1 Mb, to the email address [submissions\\_japaap@sheffield.ac.uk](mailto:submissions_japaap@sheffield.ac.uk). All submissions will be acknowledged on receipt.

## Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0001–8678/18

**Volume 50**      **Number 2**

- 327 DAVID STENLUND. On the Mabinogion urn model
- 347 TIZIANO DE ANGELIS AND GIORGIO FERRARI. Stochastic nonzero-sum games: a new connection between singular control and optimal stopping
- 373 DMITRI FINKELSHTEIN AND PASHA TKACHOV. Kesten's bound for subexponential densities on the real line and its multi-dimensional analogues
- 396 HUIJIE QIAO. Uniqueness for measure-valued equations of nonlinear filtering for stochastic dynamical systems with Lévy noise
- 414 PHILIP KENNERBERG AND STANISLAV VOLKOV. Jante's law process
- 440 DANIEL PAULIN, AJAY JASRA, DAN CRISAN AND ALEXANDROS BESKOS. On concentration properties of partially observed chaotic systems
- 480 RÉMI LEMONNIER, KEVIN SCAMAN AND NICOLAS VAYATIS. Spectral bounds in random graphs applied to spreading phenomena and percolation
- 504 GAUTAM IYER, NICHOLAS LEGER AND ROBERT L. PEGO. Coagulation and universal scaling limits for critical Galton–Watson processes
- 543 LOÏC CHAUMONT AND THI NGOC ANH NGUYEN. On mutations in the branching model for multitype populations
- 565 HUI HE, JINGNING LIU AND MEI ZHANG. On Seneta–Heyde scaling for a stable branching random walk
- 600 ELENA PERFILEV AND VITALI WACHTEL. Local asymptotics for the area under the random walk excursion
- 621 CHRISTIAN BAYER, HILMAR MAI AND JOHN SCHOENMAKERS. Forward-reverse expectation-maximization algorithm for Markov chains: convergence and numerical analysis
- 645 YUANYUAN LIU AND WENDI LI. Error bounds for augmented truncation approximations of Markov chains via the perturbation method
