# Medico-Legal Aspects

OF THE

## RUXTON CASE

By John Glaister, M.D., D.S.C., Barrister-at-Law, Regius Professor of Forensic Medicine, University of Glasgow, and James Couper Brash, M.A., M.D., F.R.C.S. Ed., Professor of Anatomy, University of Edinburgh.

Of Extraordinary Interest and Value to Pathologists,  
Psychiatrists, Psychologists, Criminal Lawyers,  
Criminologists

The now celebrated Ruxton murder case in England (1935-36) excited world wide interest, particularly in the medical and legal professions, because of unusual features, involving a physician, Dr. Ruxton, and the discovery of scattered portions of human remains which the criminal had tried to render unidentifiable. The difficult task of members of the medical faculties of the Universities of Glasgow and Edinburgh in piecing together the remains and otherwise helping to establish the identity of the victims, and the facts of the case, are described in detail in this book, with many striking photographic illustrations. It does not include a full record of the proceedings at the trial.

The modern methods employed and the results obtained are recorded for the benefit of those who may be concerned with the investigation of similar crimes. The book describes fully the anatomical, radiographic, pathological, medico-legal and other specialized work which was the basis of the expert evidence, and draws attention to the important part played by the errors and omissions of the murderer in building up the case against him. An absorbing tale of permanent value for reference. Should be in every medical and law library and at every police headquarters. *Send for a copy.* Buckram, 300 pages, 200 illustrations, \$6.00.
