

## INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,  
Department of Mathematics, The University of Queensland,  
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

### EDITORIAL POLICY

**1. References.** Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

### 2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

**3. Subject Classification.** Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

**4. Abstracts of Ph.D. Theses.** The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

**5. Electronic Manuscripts.** The Bulletin is produced using  $\text{AMS-TEX}$ . Authors who are able to do so are invited to prepare their manuscripts using  $\text{TEX}$ . (We accept Plain  $\text{TEX}$ ,  $\text{AMS-TEX}$  or  $\text{LATEX}$ .) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to [ams@maths.uq.edu.au](mailto:ams@maths.uq.edu.au). [Typed manuscripts are, of course, still acceptable.]

# Bulletin of the Australian Mathematical Society

<b>An uncertainty principle for the Dunkl transform</b> Margit Rösler	353
<b>The fixed point property for some uniformly nonoctahedral Banach spaces</b> A. Jiménez-Melado	361
<b>Lipschitz continuity of spectral measures</b> Werner J. Ricker	369
<b>Boundary two-parameter eight-state supersymmetric fermion model and Bethe ansatz solution</b> Anthony J. Bracken, Xiang-Yu Ge, Yao-Zhong Zhang and Huan-Qiang Zhou	375
<b>Polytopes of roots of type <math>A_N</math></b> Soojin Cho	391
<b>Images of Hankel operators on the polydisk</b> Boo Rim Choe and Young Joo Lee	403
<b>Two-transitive actions on conjugacy classes</b> Michael J.J. Barry and Michael B. Ward	409
<b>A note on the equation <math>\lambda * \rho * \mu = \rho</math></b> C. Robinson Edward Raja	421
<b>Optimal weighted estimates for the Cauchy-Riemann equation on analytic polyhedra</b> Hong Rae Cho and Jinkee Lee	427
<b>A fixed point theorem and its applications to a system of variational inequalities</b> Qamrul Hasan Ansari and Jen-Chih Yao	433
<b>On copies of the null sequence Banach space in some vector measure spaces</b> J.C. Ferrando and J.M. Amigó	443
<b>Weak convergence of tensor products of vector measures with values in nuclear spaces</b> Jun Kawabe	449
<b>Subnormality conditions in non-torsion groups</b> Luise-Charlotte Kappe and Gunnar Traustason	459
<b>Note on U-closed semigroup rings</b> Ryūki Matsuda	467
<b>Quasiprimitivity and quasigroups</b> J.D. Phillips and J.D.H. Smith	473
<b>A note on Jeśmanowicz' conjecture concerning Pythagorean triples</b> Maohua Le	477
<b>A KKM type theorem and its applications</b> Lai-Jiu Lin	481
<b>An Euler-type volume identity</b> Kevin Callahan and Kathy Hann	495
<b>The second variation formula for exponentially harmonic maps</b> Leung-Fu Cheung and Pui-Fai Leung	509
<b>Remarks on James's distortion theorems II</b> Patrick N. Dowling, Narcisse Randrianantoanina and Barry Turett	515

## ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

<b>Very viscous flows driven by gravity with particular application to slumping of molten glass</b> Y.M. Stokes	523
<b>Artinian rings, finite principal ideal rings and algebraic error-correcting codes</b> Jilyana Cazarán	525
<b>The stochastically subordinated Poisson normal process for modelling financial assets</b> Thomas Rome Gillespie	527
