2010 National Science Foundation Political Science Program Awards

The political science program of the National Science Foundation (NSF) announces it awards for basic research support and dissertation improvement grants for fiscal year 2010. The program funded 75 new projects and 31 doctoral dissertation improvement proposals. Additional program funds were spent on continuing grant increments, which result from awards that were made in previous fiscal years, but for which funds are being disbursed on a yearly basis instead of upfront. The political science program spent $12,753,794 on these research, training, and workshop projects and $345,389 on dissertation training grants for political science students. The program holds two grant competitions annually—Regular Research, August and January 15; and Dissertation Improvement, January 15—and constitutes a major source of political science research funding as part of fulfilling NSF's mission to encourage theoretically focused empirical investigations aimed at improving the explanation of fundamental social and political processes and structures.
